Education

Georgia Institute of Technology

Bachelor of Science in Computer Science | GPA 3.67

Relevant Coursework: Systems and Networks, Design and Analysis of Algorithms, Linear Algebra

Atlanta, GA

May 2027

Experience

Software Engineering Intern

May 2026 – August 2026

Meta Platforms, Inc.

Seattle, WA

- Unified data annotations infra to new analytics platforms including Vega, Highcharts, Next.js Recharts, and Meta CLI.
- Built AI data agent skills that create a self-improving feedback loop: investigation results are saved as annotations that accelerate future anomaly detection across analytics dashboards.
- Fixed production OOMs/timeouts by replacing in-memory filters with indexed MySQL queries; 30s+ latency became 400ms.
- Independently identified and removed 861 invalid Meta CLI flags, preventing thousands of monthly AI tool use failures.

Software Engineering Intern

January 2026 – April 2026

Uber Technologies, Inc.

San Francisco, CA

- Built a pricing data pipeline ingesting PrestoDB trip data into DuckDB across 10+ dimensions; the service reduced anomaly-investigation queries from 25 minutes to 8 seconds through DuckDB aggregation and pandas-based detection.
- Shipped a React/FastAPI SPA enabling pricing teams to identify statistically significant anomalies, compare trendlines across data aggregates/filters, and pinpoint the components driving each anomaly.
- Created a Slack alerting pipeline with an AI root-cause agent that searches internal tickets, key tables, and code changes.

Software Engineering Intern

May 2025 – August 2025

Meta Platforms, Inc.

Seattle, WA

- Architected streaming from a GraphQL server to the React Native app, reducing Facebook Marketplace feed latency by 50ms.
- Refactored server-side marketplace listing generation for incremental delivery, enabling early client-side rendering.
- Validated product improvements by designing and executing A/B tests with statistically significant control/test groups to isolate the precise impact of new features.

Software Engineering Intern

June 2024 – August 2024

Meta Platforms, Inc.

Menlo Park, CA

- Created 3 TypeScript React websites with full stack technologies including Prisma ORM, PostgreSQL, Express, and Supabase.
- Used the Relay GraphQL client to combine and cache all server requests from a Type-GraphQL and Apollo Server backend.
- Fixed faulty links in my team's Meta internal tool by extending the GraphQL API schema with PHP.

Leadership & Community Involvement

Data Structures and Algorithms Teaching Assistant

January 2025 – Present

Georgia Tech College of Computing

Atlanta, GA

- Facilitated office hour sessions, offering personalized guidance to students on advanced topics, including Dynamic Programming, Rabin-Karp pattern matching, and Binary Search Trees.
- Graded homework and exams, providing individualized feedback on algorithmic time complexity and Java coding style.

After School Coding Instructor

January 2024 – May 2024

CodeAdvantage

Washington, D.C.

- Improved tech literacy in DC-area Elementary schools by teaching computer skills, Scratch programming, and Lego Robotics.

Projects

BikeBuddy | C++, ESP32, & SPI | 1st Place Hardware Track at HackGT 12

September 2025

- Integrated ESP32 cameras and TFT SPI screens; resolved brownouts through circuit debugging and power optimization.
- Developed 3-way WiFi AP and client communication between React Native, the rear ESP32-CAM, and the front ESP32 C6.

Calm Connect | Next.js, Twilio SMS, & Prompt Developer

September 2024

- Integrated Twilio SMS phone numbers and webhooks for inbound/outbound messaging. Built an AI receptionist & calendar.

Technical Skills

Languages: JavaScript, Python, Java, TypeScript, Hack, PHP, C++, C, SQL, Go

Frameworks: React, GraphQL, React Native, Next.js, Apollo, Relay, Vite, three.js, Flask, Jinja, Selenium, ESP-IDF, TFT_eSPI
